

Date:

LO: I can calculate flight prices

Success criteria:

- I can apply the four number rules to decimal numbers.
- I can calculate percentages.
- I can lay out my working.

Jun 16-12:28

1. Find out how much a return (economy) flight ticket costs to your island.
2. Now calculate how much it would cost if a family of four flew there on holiday.
3. Surprise! The family gets a discount of 10% or 15% or 17%. How much do the tickets cost now?

Lay out your working neatly and show each step of the calculation.

Jun 16-12:28

With your parents' or teacher's permission, go onto the internet and a search engine (for instance, Google).
Type into the search: **return ticket London to *****
(*** here you should type in your island name)

I looked up flight prices to Barbados.

Something like this should come up:

Flights from London (all airports) to Bridgetown, Barbados (BGI)

London (all airports) Bridgetown, Barbados (BGI)

Mon, 10 August Sun, 23 August

British Airways	8h 45m	Non-stop	from £458
Air Canada	1d 1h+	Connecting	from £667
American	23h 29m+	Connecting	from £768

[Search flights](#)

Ideally, you want a non-stop flight.

One return ticket according to this search costs £458.
