#### Dizzy digits - answers

This puzzle was in three parts.  
You needed to answer all three parts.

Part 1: Use four 4's to make 44

Part 2: Use five 5's to make 55

Part 3: Use six 6's to make 66

Not too difficult, but there are several ways of doing some of these.

For the four fours, the most popular answer is:

$$44 - 4 + 4 = 44,$$

but we you could also have  $44 \times 4 + 4 = 44$

For the five fives, answers include

$$(5 \times 5) + (5 \times 5) + 5$$

and  $5 + 5 + 5 + 5 \times 5$

and for six sixes, answers include

$$66 - 6 + 6 - 6 + 6$$

and  $(6 + 6) \times 6 + 6 - 6 - 6$

Any other solutions?

**This week's challenge** is below.

This week's challenge is unusual as it starts with a number as an answer. The letters form the initials of a clue, then you have to write what the question is. E.g.

Question 1:

26 (answer) **L in the A** (clue) Your answer = letters in the alphabet.

Question 14:

1760 (answer) **Y in a M** (clue) Your answer = yards in a mile.

## Initial numbers

Have a go at these! Each number has some initials after it. Just work out what the initials mean as the numbers are the clues.

For example: 7 D in a W is 7 **D**ays in a **W**eek.

A good score is 12, but if you get them all right - excellent indeed!

- 26 L in the A
- 7 C in the R
- 6 W of H the E
- 7 S on a F P P
- 1000 M in a K
- 64 S on a C B
- 1066 B of H
- 28 D in F
- 24 H in a D
- 8 L on a S
- 52 C in a P (no J)
- 366 D in a L Y
- 93 M M to the S
- 1760 Y in a M
- 10 G B H on the W
- 200 P for P G in M
